

# TRANSFORMATIONAL FARM OUTPUT RISK MITIGATION (TRANSFORM)

A USAID-funded activity working at the intersection of animal agriculture and human health

## Goals

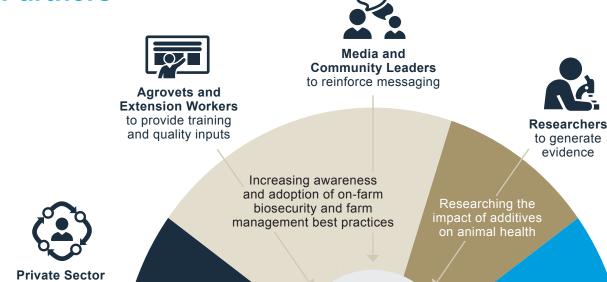

**DECREASE** risk of zoonotic disease

### **Partners**

industry adoption of antimicrobial use stewardship principles

Promoting widespread

Increasing access to finance to improve biosecurity and farm management

Government Stakeholders to increase reach and scale

Leaders to influence supply

chain practices

#### **Improving Farmer Livelihoods**

A sustainable system where farmers adopt farm management, animal nutrition and biosecurity best practices that reduce animal disease and mortality, and improve farmer livelihoods

## Strengthening Global Health Security

Farmers increase animal health at scale, reducing the emergence and spread of zoonotic and transboundary diseases, while combatting antimicrobial resistance and reducing threats to human health around the world
